

Instructions, care- & safety notices

Pure Pete
Pearly Pete
Plunging Pete

www.mystim.com

Congratulations!

So you have managed to bag a Pete. A good decision. This way, you have chosen a quality product „made in Germany“.

Our Pete is available in three different versions: Pure Pete, as the basic model, made of medical grade platinum silicone, Pearly Pete, with three 23-carat gold plated balls, and Plunging Pete, with two gold balls flanking a 24-carat dilator with a length of 3,5cm and 4 mm in diameter.

To make sure you will have lots of fun with your toy for a good long time to come, please read carefully the following instructions for use.

*We wish you an excellent time
Your Mystim Team*

This is how Pete is used

The most important thing at the start: To find the best intensity for you, do not connect the stimulator until Pete has been correctly fitted. Please use only water-based lubricant, for example our „Bonnie & Glide“, or – for even better conductivity – our Mystim conductive gel „The Goldfather“.

Pure Pete

Position Pure Pete and draw the loops tighter so that the toy encloses the head of your penis with gentle pressure. To fix the lower loop, carefully draw the ends sideways until they are held in position by the securing device.

Pearly Pete

The gold balls are particularly conductive and bundle the stimulation – and they are moveable. Before tightening the upper loop, you can move them to your very own, favourite positions.

Plunging Pete

When inserting the dilator into the urethra, you may feel slight tension or gentle pressure, but it should never be unpleasant or at all painful. Under no circumstances must you use force when inserting the dilator.

Please examine your Plunging Pete meticulously for any uneven surfaces or sharp edges before using it for the first time. Like all Mystim products, Pete undergoes a quality control before we let him out to play. But we, too, can make a mistake now and then.

For dilators, hygiene and sterility are extremely important. Make sure to sterilise your dilator and penis before and after every use and use a sterile lubricant and sterile gloves. Please make absolutely sure to observe the warnings and safety instructions for the respective products that you use for cleaning purposes.

Cleaning & Care

Each of our Petes consists of 100% medical grade platinum silicone and is therefore particularly hygienic and easy to clean with water and a mild soap. To clean Pete, please pull the loops completely out of the plastic coupling. At regular intervals, you should also use a skin-friendly disinfectant (Please observe the respective instructions for use). Before re-using Pete, please make sure that he is completely dry.

The thing with the stimulation current

E-Stim, i.e. electrical stimulation, has been gaining ever more popularity in recent years, and no wonder. In your intimate areas there are lots of nerves – far more than in other parts. With a properly regulated device for electrical stimulation and the appropriate toys, you can stimulate every single one of these nerves to a state of ecstasy.

This stimulation is perfectly safe if it is carried out with due care and attention and high-quality products.

There are a couple of things that you must be careful of:

- Persons with electronic or metal implants (e.g. heart pacemakers) must not use stimulation current without previously consulting a medical doctor. The same applies to persons with heart trouble or cardiac arrhythmia.
- Stimulation must never be carried out in a way in which current is conducted through the brain or the heart. Never stimulate the larynxes or the area of the throat. Muscle cramps in this area can lead to suffocation.
- Electrical stimulators must not be used in the vicinity of explosive or inflammable materials.
- Stimulating current may only be used on healthy skin.
- Keep out of reach of children.

For more information on e-stim, have a look at www.mystim.com

Any questions?

Just contact us.
We'll take care of it.
